Validation and AI Use - NVIDIA

Final packaging audit, October 19, 2026: the student reports completing all work except Video 3, which is IN PROGRESS. Named Video 1, Video 2 and Cold Run files were located and copied to recordings/. Corrected transcripts and remote URLs/access are not yet verified. See FINAL_SUBMISSION_CHECKLIST.md for current status; earlier pending statements are historical.

The original independent Edition A draft is unavailable. The supplied historical AI-revised Edition A and the explicitly retrospective recollection are preserved unchanged. The student reports the professor replied, "That should work. Submit them as your plan. We will make our judgement call with our reads." This permits the reported packaging plan; it does not establish independent authorship or guarantee a grade. The original message and checkpoint receipt have not been independently verified.

Decision and version

Valuation2026-09-01; Student DO NOT INITIATE; mechanical WATCH / DEFER; base$133.97. USD millions except per-share amounts; shares in millions. Current inputs/code and manifest identify the package. No git commit or receipt is invented. Original Edition A SHA256: 37fda98fc446517f3a0ca4f4a1e1d736c4422ded984bd101d42809c396a154b8.

Validation register

Check	Actual result	Evidence	Limits
SEC inputs and transformations	87 checks PASS	outputs/source_audit.json; sources/sec_verified_facts.json	AI-transcribed source ledger, not human ownership evidence
Model checks	19 PASS; 0 FAIL	evidence/tests_1792462303925.json	Accounting/math, not forecast truth
Known-answer training	27.4973704 rounds to27.50; nine grid cells	evidence/training_1792462303986.json	Synthetic reconciliation
AI directional engineering test	WACC+1pp: 133.97274 to 122.17785; watch/defer unchanged	evidence/engineering_prediction.json; latest model tests	Not the student's locked test
Restricted investment	Added once in bridge; no operating EV or BS duplication	Latest model tests; filing revision review	15% haircut remains judgment
Amortization	Filed schedule totals2998;83 remains after FY31	Latest model tests; Q27 Note4	No new-intangible acquisition forecast
Interface/HTTP	Latest recorded script/HTTP smoke test	evidence/ui_1792462304337.json	Not visual browser QA
Automated fresh-copy run	See actual steps/exit codes	evidence/cold_run_1792461867122.json	Same host; not a human partner recording
Original files	Integrity audit and Edition A hash check	manifest.json; outputs/source_audit.json	Does not certify authorship or course compliance

Initial failed engineering logs and the reason/fix remain in evidence/initial_failures.md and evidence/fix_record.md. Old passing logs are retained as historical evidence, not relabeled as current tests.

Locked changed-input record

Original record and prediction are preserved verbatim below. Evidence review and diagnosis follow; no prediction is rewritten.

Changed-input evidence review

AI-assisted review at 2026-10-19T20:22:26.888Z; original human files and commits unchanged.

Prediction commit: fd52a286ad04754c4b51b0d226bc6c62ae8b567c (Oct19 15:35:21 EDT). Results commit: f8139c1206fc450cd4803bd46783d3d255186149 (15:47:41 EDT). User-recorded executions: 15:37 changed, 15:44 restored. The record's 15:00 self-entered time is not the Git lock time.

Changed FY28-31 base revenue growth from 40%,25%,15%,10% to 10%,10%,10%,10%. H2 FY27 revenue assumptions were unchanged. Human prediction: value decreases, WATCH/DEFER unchanged. Actual: $133.97 to $93.18 (-30.45%);

WATCH/DEFER to DO NOT INITIATE. Direction matched; action prediction failed.

Diagnosis (AI-assisted after the test): decision() assigns DO NOT INITIATE when price exceeds 1.8 times model value. At $217.44, the boundary is $120.80. Original value is above this boundary; changed value is below it. The prediction missed that discrete rule, not the direction of the DCF response. Do not rewrite the prediction to match the outcome.

Baseline JSON equals the prediction commit semantically, and the replay reproduces both screenshots. Current bytes SHA256 611c267d5bbbcd0baef4365baba99aa16f9bb2139f253e7966cd964a71628a7d; Git blob SHA256 e855a4948772972df70614eae88edd67780edf2492dde13197c3a40bd25be6a5. Byte hashes can differ because of line endings. The manually recorded baseline hash is preserved as supplied, not silently corrected. Original changed-input file/hash was not retained in the supplied record; this replay does not manufacture one.

Evidence: evidence/$93 Proof.png and evidence/$133 Revalue.png (hashes in companion JSON), LOCKED_CHANGED_INPUT_BLANK.md and prediction_before_test.md. Their stale BLANK heading remains original text, superseded by the completed fields and this dated review.

Preserved human record

Locked Changed-Input Record - HUMAN COMPLETION REQUIRED

STATUS: BLANK. No designated test executed. Do not fill the prediction with AI. Official rules require a timestamp and repository commit before prediction assistance or execution; the run itself is AI closed.

Before execution: turn AI off; select a material change distinct from the automated engineering WACC test; write your own prediction below; save a timestamped immutable copy and/or commit using the course-required method. Do not backdate. Preserve the exact base input file and its SHA256. Only then execute the change, with AI still closed. Keep baseline and changed outputs, logs and hashes. A later prediction cannot repair a missing pre-execution record.

Student name: Andrew Klaich

Actual date/time/timezone: 10.19.2026/3:00 PM/EDT

Official lock method / commit identifier:

Base input SHA256:5D8B02AA58343533D11DA3F19CD242FBD46730B0F00A5B910C9EBF9FCBC1BA79

Input name and economic meaning: Base-case forecast revenue growth - projected annual increase in NVIDIA Revenue.

Old value and units: 40%, 25%, 15%, 10% annually (decimal inputs: 0.40, 0.25, 0.15, 0.10)

New value and units: 10%, 10%, 10%, 10% annually (decimal inputs: 0.10, 0.10, 0.10, 0.10)

My human-authored expected output direction and reasoning (AI OFF): I expect the share value to decrease because revenue growth will be slower than previously.

My expected effect on the investment decision (AI OFF): I do not expect the Watch/Defer opinion to change because the stock seems even less attractive than before in regards to its price.

--- LOCK ABOVE BEFORE EXECUTION ---

Actual execution timestamp and command: 10.19.2026 3:37 PM EDT - node build.mjs

Changed input SHA256:

Actual old/new output and units:$133.97 ->$93.18 per share

Actual direction: Decrease of about 30%

Decision before/after: Orginal Watch/Defer -> model now says Do Not Initiate

Failure diagnosis OR explanation of unchanged decision:

Evidence filenames / recording timestamps:

Restored baseline and verification: Restored base-case revenue growth to 40%, 25%, 15%, and 10%. Reran node build.mjs on October 19, 2026, at 3:44 PM EDT. The model returned to $133.97 per share with a WATCH/DEFER recommendation. All 87 reconciliation checks passed.

AI-use record and dispositions

OpenAI Codex generated code, tests, source comparisons and these written drafts. Material recent contributions: primary-filing verification; correction of omitted restricted investments; replacement of amortization shortcut; factual comparison with historical Edition A. Technical disposition: corrected against SEC disclosures and arithmetic checks. Student disposition: rejects WATCH/DEFER as the final recommendation; rationale is preserved in submission/Edition_B_Student_Reflection.md. Other unrecorded personal decisions are not inferred.

The baseline's partner-question label is preserved as text, not certified as an actual partner interaction. User-reported submission is recorded without certifying independent authorship. The professor response is student-reported; see the packaging disclosure above. Earlier assistant disclosure/status records are retained; the updated status supersedes earlier claims that no baseline exists.

Dated capitalization diligence

See outputs/peer_capitalization_review.md, generated by node peer_diligence.mjs. Dated basic cover-share sensitivities supplement the weighted-average diluted-share screen. AMD closed a debt offering August17; its filed pro forma cash and book-debt increases offset in simplified EV. No exact September1 capitalization or mechanically blended peer target is claimed. Sources and locators are in sources/peer_capitalization.json.

Remaining limitations and handoff

Pending: checkpoint receipt verification, any existing peer attribution, corrected transcripts, hosted links/access checks, Video 3 and personal submission. Video 1, Video 2 and the cold-run recording are now present locally. No publishing or submission has occurred.

Finance qualifications: daily balance roll, beta/ERP/spread, public/non-marketable realization assumptions, peer spot-capitalization adjustments and causal end-user demand evidence. No claim that NVIDIA filings verify market prices, Treasury rates, other issuers or forecasts. Official manifest exit0 can still contain gaps. See REQUIREMENTS.md and REMAINING_ACTIONS.md.

Current preparation disclosure

OpenAI Codex (session identifies GPT-6; exact backend revision not exposed), October19,2026: AI-assisted evidence review, threshold diagnosis, document integration, test execution and video talking points. Original prediction, reflection, screenshots and Edition A were preserved. The student reports AI-off execution; commits corroborate sequence but do not prove tool absence. No new partner test is imposed; existing Weeks5-6 records inspected did not contain completed attributed feedback.

Final packaging audit disclosure

OpenAI Codex, GPT-6 agent (backend revision unavailable), October 19, 2026: read assignment materials; reran automated tests; located and copied completed recordings; checked media and PDF integrity; corrected documentation; generated package inventory and ZIP. This is retrospective AI-assisted verification, not a new human prediction or AI-off run. The final audit found stale PDF/source hashes and preserved the prior versions before regenerating matching PDFs. Financial inputs, engine and original student records were not changed. See evidence/final_audit_results.json and evidence/final_media_audit/media_report.json.
